

VISION:

CARROT is a BEP-20 token built on Binance Smart Chain Network. CARROT will be going IDO early July. Three functions occur during each transaction: \$CARROT redistribution, Auto Liquidity Pool Acquisition and \$BNB Redistribution.

CARROT is completely decentralized and all decisions are made by community poll. Giving developers a better understanding on planning CARROT's future. No team token is given to the members.

At launch, we will send 3% of the total supply to burnt address.

ABSTRACT:

The intent of CARROT is to allow investors to collect \$BNB while holding \$CARROT. There are relatively few businesses using this business model. A potential hit token for the Carrot Project in the cryptocurrency world.

ECOSYSTEM:

\$CARROT

CARROT is a BEP-20 token built on Binance Smart Chain Network. CARROT will be going IDO early July.
Maximum supply: 1 Quadrillion \$CARROT

✓ **4% Auto Liquidity Pool**

Every trade contributes towards automatically generating liquidity that goes into the PancakeSwap Pool.

✓ **4% Redistribution into \$BNB**

4% of every transaction is taken and redistributed to all CARROT holders directly into \$BNB. Investors can directly claim their \$BNB daily or every 7 days.

✓ **1% redistribution into \$CARROT**

1% of every transaction is taken and redistributed directly to all CARROT holders.

HOW DO I EARN \$BNB BY HOLDING \$CARROT

This unique model will take out 4% of every transaction (buy/sell) and held within the smart contract

Collection amount of \$BNB is based on the amount of \$CARROT the holder owns. If you had 1% of \$CARROT supply, you are eligible to collect 1% of the BNB Reward Pool.

If investor collected more than 1 \$BNB, 20% of the collection will be used to buy \$CARROT on PancakeSwap and send to burnt address immediately. This reduces \$CARROT supply and increases the value

STAKE MINING:

CARROT mining accounts for 71% of total supply. A stake in HARE to dig a CARROT can garner high returns for holders. Stating that a person can mine or validate block transactions according to how many tokens they hold. This means that the more tokens owned by a miner, the more mining power they have.

TOKENOMICS

✓ 4% Auto Liquidity Acquisition

✓ 4% \$BNB Redistribution

✓ 1% \$CARROT Redistribution \$CARROT

CARROT PLANTATION

Q2

PHASE I

- IDO
- 1,000 Holders
- Website Launch
- CoinGecko Listing
- 2,000 Telegram Members
- Community Marketing Fund
- Marketing Campaign
- 3,000 Holders
- CoinMarketCap Listing

Q3

PHASE II

- 5,000 Telegram Members
- Website Redesign
- 9,000 Holders
- 10,000 Telegram Members
- 18,000 Holders
- Complete Audit

Q4

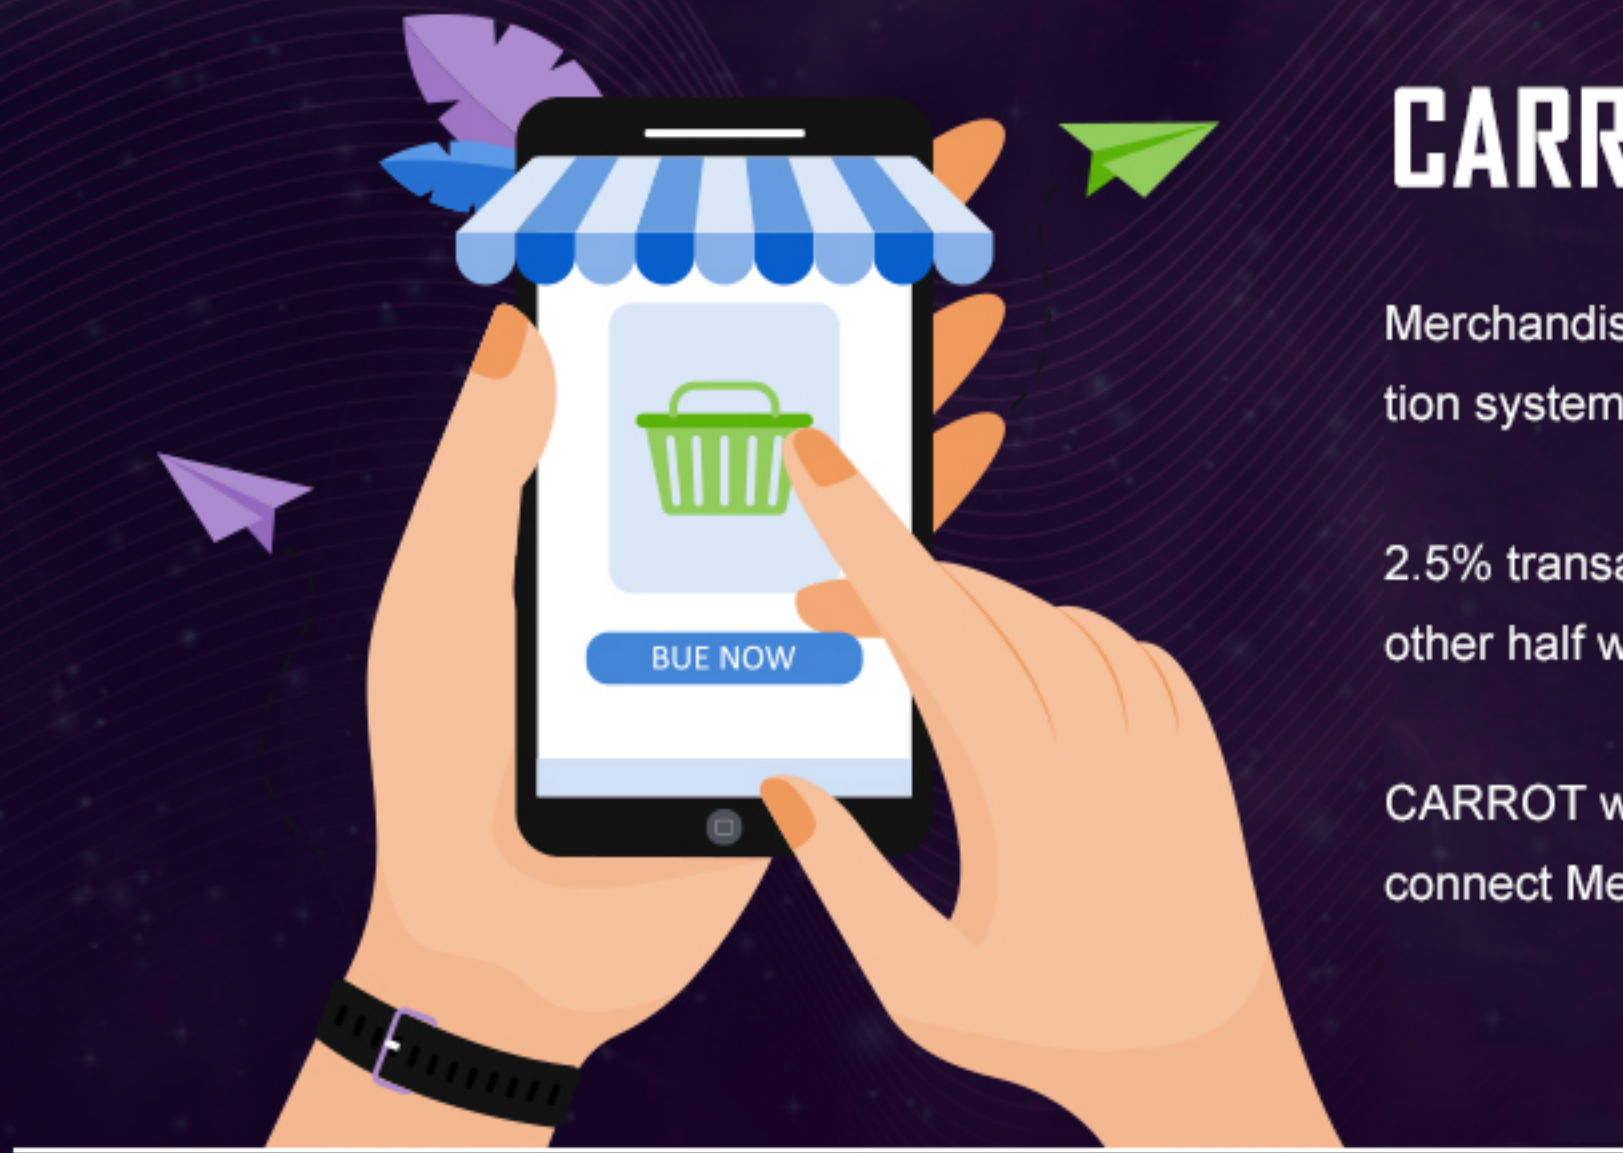

PHASE III

- Initial CEX Listings
- 15,000 Telegram Members
- 30,000 Holders

Q1

PHASE IV

- Carrot Farm
- Carrot Market
- Carrot Wallet
- 3 More CEX Listings
- 50,000 Telegram Members
- 90,000 Holders
- Influencer Marketing Partnerships

CARROT FARM

Merchandise platform that allows holders to buy merchandises with \$CARROT and integration system which allows others to sell on our platform.

2.5% transaction fee will be imposed. With every 2.5% fee 1.25% will go to Charity and the other half will be going to Development Team.
